

Soil-Max

HD Cart

Improve tiling productivity with one of the broadest ranges of stringer carts in the industry. Soil-Max stringer carts simplify tile spool transport and feeding – so you spend less time in transport and setup and more time tiling.

Commercial Grade Design.

A 5,200 lb. axle on 6-lug wheels and steel tube construction frame are built to handle the rigors of rugged terrain. A magnetic 30-foot controller and 12V DC hydraulic unit make operating the unit simple.

Flexible Feeding.

An 11' 6" tabletop diameter with disk brake turntable makes feeding tile a breeze. A 12-inch diameter stringer manages the flow of any size tile.

Customized to Your Operation.

Choose from 3-point hitch, single axle or tandem axle units. Optional hydraulic-only units and maxi-spools are also available. Or, if you need a customized unit, we can help!

Simplified Transport – In and Out of the Field.

8-ply high flotation tires (12.5 – 15) reduce soil compaction and make transport easy. LED brake lights, height-adjusting hitch and legal highway transport width makes it easy to go from field to shed.
